Dear Sir/Madam

Planning consultation: West Chiltington Neighbourhood Plan - Regulation 16 Consultation **Location:** West Chiltington

Thank you for your consultation on the above dated 18 October 2024.

Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.

Policy EH11-Water Neutrality

Natural England supports the proposed wording for Policy EH11 which states that implementation of water neutrality policies will be in alignment with the Horsham District Local Plan (2023-2024) in order to protect the Arun Valley SAC/ RAMSAR.

Natural England has no further comments to make on this policy, or on any other policies proposed within the Neighbourhood Plan.

However, we refer you to the advice in the attached annex which covers the issues and opportunities that should be considered when preparing a Neighbourhood Plan.

Final Comments

For any new consultations, or to provide further information on this consultation please send your correspondences to consultations@naturalengland.org.uk.

Yours faithfully

Sussex and Kent Area Team

Annex 1 - Neighbourhood planning and the natural environment: information, issues and opportunities

Natural environment information sources

The Magic¹ website will provide you with much of the nationally held natural environment data for your plan area. The most relevant layers for you to consider are: Agricultural Land Classification, Ancient Woodland, Areas of Outstanding Natural Beauty, Local Nature Reserves, National Parks (England), National Trails, Priority Habitat Inventory, public rights of way (on the Ordnance Survey base map) and Sites of Special Scientific Interest (including their impact risk zones). Local environmental record centres may hold a range of additional information on the natural environment. A list of local record centres is available from the Association of Local Environmental Records Centres.

Priority habitats are those habitats of particular importance for nature conservation, and the list of them can be found here2. Most of these will be mapped either as **Sites of Special Scientific Interest**, on the Magic website or as **Local Wildlife Sites**. Your local planning authority should be able to supply you with the locations of Local Wildlife Sites.

National Character Areas (NCAs) divide England into 159 distinct natural areas. Each character area is defined by a unique combination of landscape, biodiversity, geodiversity and cultural and economic activity. NCA profiles contain descriptions of the area and statements of environmental opportunity, which may be useful to inform proposals in your plan. NCA information can be found https://example.com/here-1/4.

There may also be a local **landscape character assessment** covering your area. This is a tool to help understand the character and local distinctiveness of the landscape and identify the features that give it a sense of place. It can help to inform, plan and manage change in the area. Your local planning authority should be able to help you access these if you can't find them online.

If your neighbourhood planning area is within or adjacent to a **National Park** or **Area of Outstanding Natural Beauty** (AONB), the relevant National Park/AONB Management Plan for the area will set out useful information about the protected landscape. You can access the plans on from the relevant National Park Authority or Area of Outstanding Natural Beauty website.

General mapped information on **soil types** and **Agricultural Land Classification** is available (under 'landscape') on the <u>Magic</u>⁴ website and also from the <u>LandIS website</u>⁵, which contains more information about obtaining soil data.

Natural environment issues to consider

The <u>National Planning Policy Framework</u>⁶ sets out national planning policy on protecting and enhancing the natural environment. Planning Practice Guidance⁷ sets out supporting guidance.

Your local planning authority should be able to provide you with further advice on the potential impacts of your plan or order on the natural environment and the need for any environmental assessments.

Landscape

Your plans or orders may present opportunities to protect and enhance locally valued landscapes. You may want to consider identifying distinctive local landscape features or characteristics such as ponds, woodland or dry stone walls and think about how any new development proposals can respect and enhance local landscape character and distinctiveness.

⁷ http://planningguidance.planningportal.gov.uk/blog/guidance/natural-environment/

If you are proposing development within or close to a protected landscape (National Park or Area of Outstanding Natural Beauty) or other sensitive location, we recommend that you carry out a landscape assessment of the proposal. Landscape assessments can help you to choose the most appropriate sites for development and help to avoid or minimise impacts of development on the landscape through careful siting, design and landscaping.

Wildlife habitats

Some proposals can have adverse impacts on designated wildlife sites or other priority habitats (listed here), such as Sites of Special Scientific Interest or Ancient woodland9. If there are likely to be any adverse impacts you'll need to think about how such impacts can be avoided, mitigated or, as a last resort, compensated for.

Priority and protected species

You'll also want to consider whether any proposals might affect priority species (listed here 10) or protected species. To help you do this, Natural England has produced advice here 11 to help understand the impact of particular developments on protected species.

Best and Most Versatile Agricultural Land

Soil is a finite resource that fulfils many important functions and services for society. It is a growing medium for food, timber and other crops, a store for carbon and water, a reservoir of biodiversity and a buffer against pollution. If you are proposing development, you should seek to use areas of poorer quality agricultural land in preference to that of a higher quality in line with National Planning Policy Framework para 112. For more information, see <u>Guide to assessing development proposals on agricultural land</u> ¹².

Improving your natural environment

Your plan or order can offer exciting opportunities to enhance your local environment and should provide net gains for biodiversity in line with the <u>National Planning Policy Framework</u>. If you are setting out policies on new development or proposing sites for development, you should follow the biodiversity mitigation hierarchy and seek to ensure impacts on habitats are avoided or minimised before considering opportunities for biodiversity enhancement. You may wish to consider identifying what environmental features you want to be retained or enhanced or new features you would like to see created as part of any new development and how these could contribute to biodiversity net gain and wider environmental goals.

Opportunities for environmental enhancement might include:

- Restoring a neglected hedgerow.
- Creating a new pond as an attractive feature on the site.
- Planting trees characteristic to the local area to make a positive contribution to the local landscape.
- Using native plants in landscaping schemes for better nectar and seed sources for bees and birds
- Incorporating swift boxes or bat boxes into the design of new buildings.
- Think about how lighting can be best managed to reduce impacts on wildlife.
- Adding a green roof to new buildings.
- Providing a new footpath through the new development to link into existing rights of way.

¹²https://www.gov.uk/government/publications/agricultural-land-assess-proposals-for-development/guide-to-assessing-development-proposals-on-agricultural-land

Site allocations should be supported by a baseline assessment of biodiversity value. The statutory <u>Biodiversity Metric</u> may be used to understand the number of biodiversity units present on allocated sites. For small development allocations the <u>Small Sites Metric</u> may be used. This is a simplified version of the statutory <u>Biodiversity Metric</u> and is designed for use where certain criteria are met. Further information on biodiversity net gain including planning practice guidance can be found here

You may also want to consider enhancing your local area in other ways, for example by:

- Setting out in your plan how you would like to implement elements of a wider Green Infrastructure Strategy (if one exists) in your community.
- Assessing needs for accessible greenspace and setting out proposals to address any
 deficiencies or enhance provision. Natural England's <u>Green Infrastructure Framework</u> sets out
 further information on green infrastructure standards and principles
- Identifying green areas of particular importance for special protection through Local Green Space designation (see <u>Planning Practice Guidance</u>¹³).
- Managing existing (and new) public spaces to be more wildlife friendly (e.g. by sowing wild flower strips in less used parts of parks or on verges, changing hedge cutting timings and frequency).
- Planting additional street trees.
- Identifying any improvements to the existing public right of way network, e.g. cutting back hedges, improving the surface, clearing litter or installing kissing gates) or extending the network to create missing links.
- Restoring neglected environmental features (e.g. coppicing a prominent hedge that is in poor condition, or clearing away an eyesore).

Natural England's <u>Environmental Benefits from Nature tool</u> may be used to identify opportunities to enhance wider benefits from nature and to avoid and minimise any negative impacts. It is designed to work alongside the statutory <u>Biodiversity Metric</u> and is available as a beta test version.
